

IBIAGI

SOPHISTICATED INTERIORS.

Some information about the materials used for the construction of furniture in this catalogue can be found in the company presentation. In general, the structures are made of bronze lined with fine materials (malachite, amethyst, lapis lazuli, marble etc.), and the bronzes gilded with 24 kt gold using a galvanic process, then coated to keep them unchanged over time, avoiding blemishes and fading. The bronze decorations are made using the ancient procedure called lost wax casting. The combination of the materials, the coatings and the bronzes are the result of an accurate phase of modelling usually carried out in synergy with the customer in order to ensure perfect results. Every piece of furniture illustrated can be customised in size, materials and finishes by adding and/or changing the current elements, working with the customer to achieve the best possible harmony with the environment for which it is intended. Some furniture can be fitted with adjustable legs to compensate for any unevenness in the floor. All work is done in Italy by our expert craftsmen in constant collaboration with our designers to ensure a perfect combination of aesthetics and quality of workmanship. The furniture is shipped in special wooden cases made to measure, ensuring maximum stability and safety during transport.

SALA degli STUCCHI

SOPHISTICATED INTERIORS.
